MANUAL OF CLINICAL IMMUNOLOGY

Edited by Noel R. Rose and
Herman Friedman

A joint effort by members of the American Society for Microbiology
and the American Association of Immunologists

This definitive and much needed new book is a companion volume to the highly acclaimed *Manual of Clinical Microbiology*, 2nd Edition. It has been written to provide a current, comprehensive, and definitive source of information about the best methods for conducting specific immunological tests in laboratory immunology. It will be invaluable for:

laboratory directors and technologists responsible for the performance of immunological tests in the clinical laboratory graduate students medical students medical technology students post-doctoral trainees residents fellows clinicians.

In addition, it will be an essential addition to the working library of every clinical chemistry laboratory, blood bank, and hematology laboratory. It also belongs in laboratories involved in the diagnosis of autoimmune and collagen diseases, surgical laboratories doing tissue and organ transplantation, and labora-

tories involved with cancer immunology. It deals exclusively with the applications of immunology to the detection and analysis of a wide variety of diseases, including, but not limited to, those induced by microorganisms. The clinical interpretations of each procedure are detailed, and pitfalls and problems in performing the various analyses are discussed.

NEW FROM ASM

CURRENT CHEMOTHERAPY

Proceedings of the
10th International
Congress of Chemotherapy,
Zurich, Switzerland,
September 1977

Publication Date: 28 February 1978

This brand new, up-to-the-minute publication represents the most exhaustive compendium of antimicrobial and anticancer chemotherapy knowledge available. Because of the rapidity of publication (a mere five months after the superb Congress was held), it will be an invaluable addition to the library of all scientists and clinicians working in the field. By using extended abstracts of the 26 symposia and 600 communications, the book provides the reader with ready access to a vast body of knowledge about infectious diseases and oncology. With contributors from 65 countries, the perspective is truly international. It is also interdisciplinary,

reflecting the need for ongoing communication among scientists from a wide array of specialties, and the clinicians who will ultimately administer new chemotherapeutic agents.

Thus CURRENT CHEMOTHERAPY will be an extraordinarily useful sourcebook for chemists, biochemists, molecular biologists, microbiologists, enzymologists, immunologists, and pharmacologists, as well as for physicians who treat infectious diseases and cancer patients. It is also an essential acquisition for every medical, hospital, pharmaceutical, and biomedical library.

Since publication in August 1974, the completely revised and up-dated second edition of *Manual of Clinical Microbiology* has been established as an extraordinarily useful guide for all involved in laboratory work. It has also been widely adopted as a textbook, both for medical students and medical technology students. If you do not already own a copy of this exceptional book, please take this opportunity to place your order today.

In the book, the appropriate methods for complete microbiological examination of clinical specimens are fully presented, as are the correct procedures for the isolation and identification of bacteria, fungi, viruses, and parasites. While emphasis is given to those organisms most commonly found in human infection, the rarer organisms are not ignored.

A brand new book on a topic of clinical and research concern —

Immunobiology of *Neisseria gonorrhoeae*

Editors: Geo. F. Brooks, Emil C. Gotschlich, King K. Holmes,
William D. Sawyer, Frank E. Young

Introduction by: William S. Jordan, Jr., and Milton Puziss

In the last few years, intensified interest in the study of gonococci and gonorrhea has resulted in an explosion of knowledge and understanding of the disease. In January 1978, a group of leading scientists and clinicians met in San Francisco for three days to confer about the current status of research into *Neisseria gonorrhoeae*.

The result is a book, at times controversial, always thought-provoking, on the status quo of a sexually transmitted disease which has reached epidemic proportions.

The book covers six major areas, and includes over 70 papers. The main sections are:

- I. *Neisseria gonorrhoeae* Physiology, Genetics, and Antimicrobial Susceptibility
- II. *Neisseria gonorrhoeae* Cellular Antigens and Antigenic Analysis
- III. Pathogenicity and Immunity
- IV. Immunity and Vaccine
- V. Current Concepts and Future Strategies
- VI. Panel Discussion

This new book will have wide appeal to clinical microbiologists, public health specialists, specialists in infectious diseases, venereologists, immunologists, and practicing physicians.

Note _____

Nongonococcal Urethritis and Related Infections is still available, and provides useful material on venereal disease caused by the microorganisms *Chlamydia trachomatis* and *Ureaplasma urealyticum*. WHEN **MIC** IS EASIER
to test than Kirby-Bauer
and costs no more—
will you still be able to
justify not getting
quantitative data
on all clinical
isolates

Infectious disease specialists and laboratory directors in more than 300 hospitals which use MICRO-MEDIA's inexpensive new MIC test panels now guide physicians with greater confidence to initial chemotherapy and have *immediately* at hand the quantitative data they need when a patient fails to respond to early treatment.

Bench technicians hail the speed and convenience of inoculating these panels, their ease of reading, and their forgiving tolerance of variations in technique.

FDA has approved them. Experts attest their reliability. Administrators like their price.

Ready-to-use frozen test panels contain serially diluted antimicrobial drugs for Gram Negative and Gram Positive organisms, and/or biochemical media for identification of *Enterobacteriaceae* or *Streptococci*. No capital outlay. No reconstitution. Just inoculate both MIC and ID tests simultaneously with one hand motion, incubate, and read. Request brochure and distributor list:
